Mark,

This spill originated from near the wellhead, and traveled down a dry wash to the Smoky Hill River. The operator did not report the spill to us, and after I found it, I instructed them to call NRC, which they did. I have attached a copy of our initial report with a map of the spill area, spill report, follow-up report, and the information submitted to us by Black Tea. The wellhead is located at 38.80831, -100.93233 NRC #1108357.

I will work on a list of known issues that Luke, Steven, and I had been working on, so that we can make sure that we're all on the same page going forward.

Thanks,
Chris Neeley
